- Chris M's response included "... An interesting point in the House of Olbrich paper is the use of non-photorealistic rendering (NPR) in their creation of the digital overlay"

• Hassan's response included "...the users instead would snap an image of the location which is then sent to a server and within two or three seconds returns the generated AR result.

- Jashan's response included "... Imagine the Roman Colosseum, but when you look through an AR lens, you can see the crowds that would have existed there and experience the events firsthand."
